ROLLING STALK CHOPPER

Economical, Effective Residue Management!!!
Rolling Stalk Chopper

Prepare Fields – Conserve Moisture!!

- Simply hitch to your three-point, choose your ground speed and go!
- The chopping activity promotes warming and drying of the soil. In many instances, the field can be planted immediately following the chopping action.
- Performs best at speeds in excess of eight miles per hour, often doubling the ground speeds of other tillage tools.
- Two-row to sixteen-row models available.
- Adjustable reel mounting brackets allow angles to be changed to match the desired chopping action.
- Hardened-steel chopping blades.
- 7" x 7" rugged, heavy-duty toolbar.
- Larger machines available on folding toolbar.
- Reels feature greaseable 1 ½" flange bearings with triple-lip seal.
- Optional bearing guards offer added protection from wrapping when operating in rye or other stubble.

Features and Benefits

- Offers a simple, economical method for chopping standing stalks.
- A ground-driven tool designed for spring or fall preparation of crop residue.
- Eliminates the worries and hassles of U-joints, gearboxes, drive assemblies, hydraulic hook-ups, and PTO junctions.

Optional Equipment

**H Harrows**
Choice of harrows for additional field conditioning, smoothing, and spreading of residue.

- **Spike-Tooth Harrows**
  - For moderate residue levels.
  - Available in three-bar or five-bar models.

- **Chain-Link Harrows**
  - For high residue levels.
  - Available in a variety of lengths.

**Weight Box**
Allows adding weight to aid in chopping tough residue, such as, cotton.
Rigid Models

- Single or double toolbar.
- On the front bar, each reel has eight 22" chopping blades.
- On the rear bar, each reel has six 22" chopping blades. (Eight-blade option available.)
- Fixed linkage between front and rear gangs.
- Designed to operate in no-till, minimum till, ridge till, or conventional fields.
- Two-row male seed corn eliminator model available.

Single Bar, Rigid Model offers an economical means for fields requiring only minimal field preparation.

Double-Bar, Rigid Model — Designed to operate in no-till, minimum till, ridge till, or conventional fields.

Flex Models

- Independent parallel linkage between front and rear gangs.
- Regular Flex Model has the front reels mounted on a single, continuous toolbar and the rear reels on a single continuous toolbar. It is designed to operate in ridge till or bedded fields.
- Hi-Flex Model has the front reels mounted on a single, continuous toolbar and the rear reels each mounted on its own individual toolbar. It works well in knocking down a cover crop. It is also more rock compatible.
- Regular Flex Model: front reels have eight 22" chopping blades per reel; rear reels have six 12" chopping blades per reel.
- Hi-Flex Model: front reels have eight 22" chopping blades per reel; rear reels have six 22" chopping blades per reel.

Regular Flex Model — Designed to operate in ridge till fields.

Front reels chop ridge stalks.

Back reels chop valley residue.

Hi-Flex Model — Designed as a more rock compatible unit; also works well when knocking down cover crops. Shown with optional bearing guards.
Available in two-row to sixteen-row models, the rolling stalk chopper utilizes a rugged, heavy-duty toolbar. Larger models are available on a folding toolbar.

Adjustable reel mounting brackets allow you to choose the chopping action needed. More angle for more aggressive chopping action; less angle for less aggressive chopping action.

---

**Seed Corn Chopper**

**Two-Row Seed Corn Male Row Eliminator**

- Chops and destroys the male rows, allowing more growth-stimulating sunlight to the female plants.
- Soil nutrients and water formerly utilized by the male plants are now available for absorption by the seed-producing female plants.

Optional six-blade 12" reel on flexible linkage thoroughly cleans up the row middle.
